

Mobile Wheelchair Platform

Description

In clinics where building adaptations and access are a problem the mobile platform can be installed. It is a surface mounted unit requiring no additional building work. The platform can be moved into place for use and away again for storage. This gives good access to the normal dental couch when in use.

The mobile platform has all the features of the 'Standard' unit with movement on an air cushion provided by the clinic compressed air supply. This gives easy stress free motion across the floor. The platform can be ready for use in minimal time.

Specifications

- Clinician position left or right
- Motorised or manual wheelchairs
- Open fronted design for easy access
- For use with motorised and manual wheelchairs
- Maximum tilt 45deg taking the head to lap height for easy working
- Safe working load 270kg tested to 300kg
- Low maintenance Design Specific
- Floor area 1010mm x 1110mm
- Plug connection to surgery compressed air supply
- Platform floats on an air cushion for transfer
- No damage to vinyl floor covering that must be shiny
- Hard wearing sintered powder coating
- Overnight charging for a full day's use
- Ease of floor cleaning
- EMC tested
- Machinery directive compliant
- Low voltage directive compliant
- Use of normal dental stool

Installation

- Access to the compressed air supply is needed using a plug connection
- No building changes necessary
- Operation on 240v via a flying lead or backup batteries

Finance

Through the First National Bank, Design Specific offers Lease Purchase and Rental arrangements. This significantly changes the funding for a project for the repayments can be taken from a revenue rather than capital budget.
